Notice of Community Open House No. 2
Whitby Coastal Flood Risk Assessment and Municipal Class Environmental Assessment

The Town of Whitby, in partnership with the Central Lake Ontario Conservation Authority (CLOCA), has initiated a Coastal Flood Risk Assessment and Municipal Class Environmental Assessment (Class EA) study to assess the risk of coastal flooding and erosion along the Lake Ontario shoreline from Lakeridge Road to Boundary Road within the Town's limit. The study will assess the potential for flooding and erosion damages on the shoreline and identify the anticipated 100-year flood hazards and inundation zones.

The first Community Open House was held on June 4, 2019 and introduced the purpose of the study, reach delineation, identification of potential erosion hazards, shoreline structure inventory, and visual condition assessment of the shoreline. Since then, the study team has completed an evaluation of alternative solutions to mitigate the risk of flooding or erosion damage, wave uprush analysis, flood hazard assessment and dynamic beach analysis have been performed. The area of concern is delineated in the following illustration.

The Process

The Study is being carried out in accordance with the planning and design process for ‘Schedule B’ projects as outlined in the Municipal Engineers Association "Municipal Class Environmental Assessment," (October 2000, as amended in 2007), which is approved under the Ontario Environmental Assessment Act. However, for this project, a higher level of consultation will be conducted, which is sufficient to meet the requirements of a ‘Schedule C’ project Community Open House:
Input from the public is important to this study. The Second Community Open House (COH) for this Class EA study is scheduled for:

**Wednesday, October 30, 2019 – 6 p.m. to 8 p.m.**

**301 Watson Street West (Port Whitby Marina), Whitby, Ontario**

The purpose of the COH 2 is to provide an overview of the project, present information on the current conditions, possible alternative solutions to mitigate the risk of flooding or erosion damage, the next steps in the study process and collect public input about the project. Representatives from the Town, CLOCA and the consulting team will be available at the COH to provide information, answer questions, and receive information for consideration throughout the study. The COH will be conducted in an open house (drop-in) format with display material available for review.
